

# Vectron C56

## Customer display

Parallel to the new generation of stationary POS systems, Vectron developed customer displays in a design that perfectly matches the new product line. The C56 with black-and-white LCD has a screen diagonal of 13.2 cm (5.2"). It is attached at the rear housing by means of a hinge so that the tilt angle is adjustable.

The customer display is alternatively available as stand-alone device. The pole variant is available in two different heights and can be swivelled to the side for optimum adjustment to the customer's viewing angle.
