

System concept

With the myVectron-App one gets access to the most important key figures of a company from anywhere, no matter whether one or dozens of branches are operated. The user gets a fast overview on current sales, customers, invoices, the number of operators and when the respective sales were generated, each with the reference value. A detailed chart is available for any of these values.

The MyVectron-App provides forecasts for the company or for every single branch. It builds trends and shows the expected sales by the branch. For trends and forecasts, the daily sales are always calculated in relation to the day of the previous week. The list of branches displays sales, trends and forecasts as well as the number of invoices/customers and operators. One can sort this list by sales or by other criteria. Previous sales in common time units and the comparable periods are also displayed.

The myVectron-App displays bestsellers as well as slow sellers at a glance. Not only does it show the single titles but also the ratio of the top 5, top 10 and other products to the total sales, as percentage and as amount.

Features

myVectron-App scope of functions	
Daily sales (company-wide) incl. relation to comparable day
